

**driveseries!** – safer floors, better service drives.

**slipresistant**  
textured floor surfaces

The **driveseries!** is the result of many years of research into helping dealerships better-manage risk related to slip and falls in the service lane. Many things must be considered such as facility design, protection from weather elements and dealership cleaning practices.

However, AutoStone's **driveseries!** provides you the best floor surface to minimize slip-and-fall when selecting your floor tile.

### Advanced surface technology

The **driveseries!** surface is unique in design and function. The surfaces' line pattern allows water to channel off the tile faster than other textured tiles. Fast moisture migration is an important component in reducing slip and fall risk.

Additionally, the line patterns rise provide excellent grip for the soles of shoes. These lines extend above the surface plane, so traction points are above areas where moisture migration occurs.

No other product provides your dealership a better surface design to help manage the risk associated with slip and fall concerns. The **driveseries!** from AutoStone is your best service floor choice.

### Bright finish - ultra-cleanable technology

The **driveseries!** includes AutoStone's propriety "Bright Finish" which aids dealership cleaning practices. Bright is the best resource to help address issues related to rubber transfer from today's softer, higher silicon based tires. The surface is built with superior technology that helps keep your floors looking beautiful. Dealers still need to maintain proper cleaning practices. However, with "Bright Finish" dealerships are able to maintain their floors with this cleaning aid that lasts the life of the floor.

### Creating the concierge level service

A service drive built with the **driveseries!** creates the right impression for your customer year-after-year. With proper cleaning practices, your service drive can look like the day it was installed. Temporary coatings degrade every time a vehicle drives on an epoxy or sealed concrete finish. Other tiles don't aid your dealership cleaning practices. Only an AutoStone floor looks clean, uniform and professional for the life of your dealership.

Safer, smarter, better - the **driveseries!** by AutoStone.
