## floor systems

**driveseries!**  
advanced surface  
technology

## autoplates

**Form and function. AutoStone Floor Systems addresses the details!**

### What you get when you don't address the details

This image shows how drains and clean-out covers are improperly handled in non-AutoStone installations.

With epoxy coatings, polished/sealed concrete or other tile products you get what you see above. Avoid ragged/chipped edges, trip hazards, dirt collectors and bad aesthetics.

Go with AutoStone. The details are addressed when you choose autoplates with your AutoStone floor!

Addressing the details with an integrated floor solution is what an AutoStone Floor System is about. We handle the details and your job gets done right.

You don't sweat the small stuff, because we do.

AutoStone Floor Systems continues to bring innovation and exceptional function to the shop floor environment with autoplates. Autoplates provides you a comprehensive solution that seamlessly addresses your service department drain and clean-out plate challenges. When you choose autoplates with your Enviroshop floor, AutoStone provides aesthetically pleasing drain covers and clean-out covers with your floor system. AutoStone Floor Systems is the only company to address these shop and service work area concerns.

Drains, clean-outs and other type floor elements are not addressed by epoxy coatings, polished or sealed concrete, or by other tile products. Problems with poorly installed drain covers un-level with the floor or improperly aligned can be a hazard. These problems not only look bad, but create bigger problems for your dealership. These problems are solved with autoplates by AutoStone.

Traditionally, solving these problems has fallen between subcontracted trades. The result is no one addresses them or accepts this as part of their contracted duties.

**AutoStone addresses the details!**

At AutoStone Floor Systems we manage the entire installation so the job is done right - before we leave. When we finish your project, you have the right solution installed - every time!

**autoplates** by AutoStone provides you the best integrated floor solution where every detail is addressed!

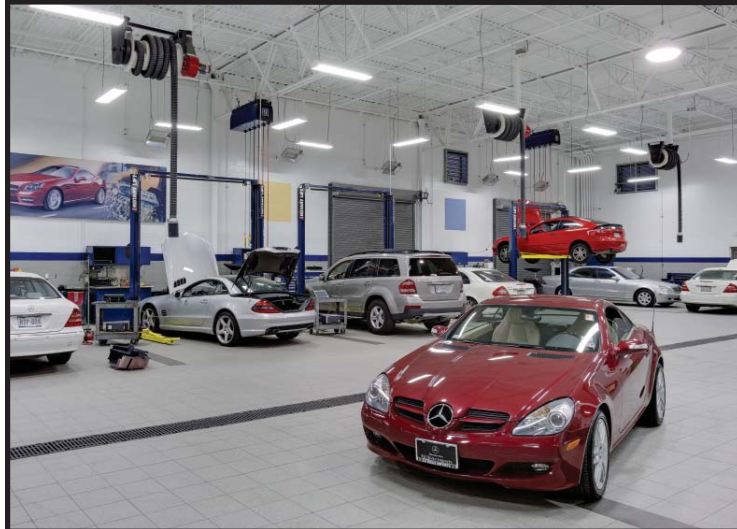

## Service Drive Floor System

### the concierge experience

Investing in an AutoStone service drive is one of the best investments you can make for your facility. Creating a positive visual impact in the service department impacts all aspects of your dealership. The level of service you deliver will impact repeat service customers as well as new and/or used vehicle buyers.

You feel the difference when you drive on an AutoStone Floor. You see the difference when you drive into a service facility with an AutoStone Floor. Our rubber-retardant surface resists tire tracking. AutoStone reduces slip-n-fall scenarios with our textured surface. AutoStone enhances your customer service experience!

## The Best Service Department Floor System

### the permanent floor

With AutoStone you get a permanent floor for your service department. With epoxy or concrete options you get a temporary floor surface. These type surfaces deteriorate from the time the first vehicle drives into your service department.

AutoStone is the lowest cost solution when you evaluate your real costs over a period as short as five (5) years. One resurfacing of other coatings and your floor will end up costing 50% more than the initial purchase price of an AutoStone Floor.

Other products are only a temporary surface that needs replacement every 3-5 years. Go with the permanent floor solution. Never resurface your floor again with AutoStone!
