## Your shop is an extension of your showroom.

Clean facilities impact your customers perception of your dealership. How your service is presented impacts how your customers evaluate your performance.

Clean and beautiful floors are the foundation of your service presentation. AutoStone floors are built with superior product technology, durability, craftsmanship and performance.

AutoStone floors provide the best opportunity to deliver better service experiences.

## The new service paradigm.

Many brand programs now encourage making the service facility viewable to the customer. Creating an automotive “state-of-the-art” service facility elevates your brands perception.

AutoStone provides your dealership the best floor solution to aid in keeping your shop looking clean and professional.

AutoStone presents your service facility best.

## Temporary coatings or permanent floors?

When you are selecting floor options for the shop area, make sure you select a permanent floor solution. Temporary coatings like epoxy or sealed concrete may be initially less, but end-up costing the most because they have a short life cycle.

Temporary coatings will show poorly soon after installation and use. AutoStone is a permanent floor system for your shop floor work areas.

No need to shut down service operations, we renovate while you operate.

Never resurface your service drive or shop again.

## Better technology drives better results.

AutoStone service drive and shop floors can be maintained in a like-new condition with regular cleaning practices. AutoStone's proprietary "bright finish" aids dealership cleaning practices. Bright is the best resource to help address issues related to rubber transfer from today's softer, higher silicon based tires. This surface is built with superior technology that helps keep your floors looking beautiful.

Professional and presentable service facilities without difficult to clean tire tracking are achievable with AutoStone's advanced automotive technology.

AutoStone is the best solution for a better shop.

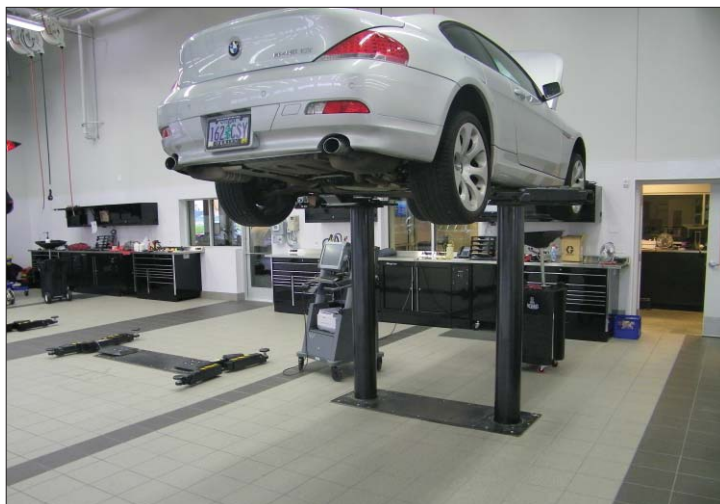

## Slip-and-fall safety

Enviroshop meet the ANSI A137.1 slip-and-fall standards. Environmentally controlled shop floor facilities must meet the minimum DCOF standard rating.

Enviroshop exceeds those industry minimum standards and is tested by TCNA laboratories (Tile Counsel of North America).

Addressing this ANSI standard for your shop floor environment is a game changer for the automotive industry.

AutoStone floors deliver a better way to manage risk and reduce slip and fall standards with Enviroshop.

## Your best assurance is the best warranty.

We provide all automotive dealers a seven (7) year warranty to be free of cracked or broken tiles\* (see warranty for details and specifics).

AutoStone shop floors come with the best warranty because we build the best floors with the best product. No other product or service compares to an AutoStone Floor System.

Build it right, AutoStone once,  
AutoStone forever.

## Advanced shop floor technology

### AutoStone Floor Systems

Our "ultra cleanable technology" does what others can't do, we provide you a shop floor system that is both easy to clean and resists slip-and-falls better than other products.

### What the others don't tell you about rubber-transfer

The composition of tires is constantly changing and these changes result in greater rubber-transfer. Every time a vehicle drives in or out of your service facility - rubber-transfer impacts your floor system. Only AutoStone builds a product to address this concern.

Other "tile or clinker" brand products are not designed specifically for automotive shop floors. They are designed to address applications related to the food service industry. These other tiles do not specifically address "ease-of-clean" issues and how to make sure your floors don't trap rubber, oil, grease and other such contaminants related to automotive.

### AutoStone is designed and built specifically for automotive

AutoStone only does automotive facilities. Our product engineers have designed and built the best shop floor solution for your dealership. No one does what AutoStone does.

Our shop floor system is designed to be permanent, easy to clean (with proper maintenance) and exceed the ANSI A.137 slip-and-fall standard. We do this with our seven (7) year warranty and life time (technical) cleaning support.

### "Bright Finish" - Ultra cleanable technology

## brightfinish

ultra cleanable technology

AutoStone's "Bright Finish" (ultra cleanable technology) aids in helping with your shop floor and service drive appearance. "Bright" makes your floor easier to clean.

Contaminants are easier to remove and cleaning practices are easier to maintain.

### "Slip Resistant" Surfaces - Textured floor surfaces

## slipresistant

textured floor surfaces

AutoStone floors are safer to walk-on and work-on. Our highly textured surface is the highest rated "slip-resistant"

surface based on the new ANSI A137 DCOF testing. Guard your facility with the best floor surface for your dealership.

Go with the automotive experts and call the best - AutoStone.
