

Advanced shop floor technology

AutoStone Floor Systems

Our "ultra cleanable technology" does what others can't do, we provide you a shop floor system that is both easy to clean and resists slip-and-falls better than other products.

What the others don't tell you about rubber-transfer

The composition of tires is constantly changing and these changes result in greater rubber-transfer. Every time a vehicle drives in or out of your service facility - rubber-transfer impacts your floor system. Only AutoStone builds a product to address this concern.

Other "tile or clinker" brand products are not designed specifically for automotive shop floors. They are designed to address applications related to the food service industry. These other tiles do not specifically address "ease-of-clean" issues and how to make sure your floors don't trap rubber, oil, grease and other such contaminants related to automotive.

AutoStone is designed and built specifically for automotive

AutoStone only does automotive facilities. Our product engineers have designed and built the best shop floor solution for your dealership. No one does what AutoStone does.

Our shop floor system is designed to be permanent, easy to clean (with proper maintenance) and exceed the ANSI A.137 slip-and-fall standard. We do this with our seven (7) year warranty and life time (technical) cleaning support.

"Bright Finish" - Ultra cleanable technology

AutoStone's "Bright Finish" (ultra cleanable technology) aids in helping with your shop floor and service drive appearance. "Bright" makes your floor easier to clean.

Contaminants are easier to remove and cleaning practices are easier to maintain.

"Slip Resistant" Surfaces - Textured floor surfaces

AutoStone floors are safer to walk-on and work-on. Our highly textured surface is the highest rated "slip-resistant"

surface based on the new ANSI A137 DCOF testing. Guard your facility with the best floor surface for your dealership.

Go with the automotive experts and call the best - AutoStone.
