Resilient Armour can be used in the Audi service facility workshop area. RA is an alternate to an epoxy coating or polished concrete surface. With Resilient Armour, Audi dealers don't have to step-down to epoxy or polished concrete surface to have an affordable workshop floor and service department floor.

RA is a long-life cycle product that delivers a surface life much longer than either epoxy or polished concrete surfaces. If repairs are needed, you only repair or replace those worn sections.

This is a great solution that overcomes the price challenge for workshop environments. It delivers a better appearance, and doesn't degrade like epoxy or polished concrete finished surfaces. In short – this is a big win!

Click image below for a product introduction:

RA IS RECOMMENDED FOR CLIMATE CONTROLLED ENVIRONMENTS WITH A ROOF, WALL AND DOORS FLOOD SAFE, WATER RESISTANT, + SOUND REDUCTION

CLIMATE CONTROLLED ENVIRONMENTS

For environments with a temperature room range of 40- and 104-degrees.*

*Check your adhesive manufacturer for use and installation temperature.

FLOOD SAFE & WATER RESISTANT

Panels and adhesive are moisture-resistant and can be submerged for days and remain bonded.

*Check with your adhesive manufacturer for use and moisture exposure levels.

LESS NOISE BETTER CONDITIONS

Reduces noise decibels (dB) and improves working conditions.
