Why AutoStoneUSA Is The Right Choice For Kia Dealership Projects

Better Installation Outcomes with AutoStoneUSA Integrated Materials

The Infinity Loop is a critical design feature for Kia projects. The graphic (bottom left) shows the importance of the flush surface integration of the T-1 tile used for the vehicle display and the T-2 (woodplank) tile used for showroom areas.

Where these tiles meet (at the Infinity Loop), the installation requires a flush surface. AutoStoneUSA materials (used together) deliver better results!

T-1

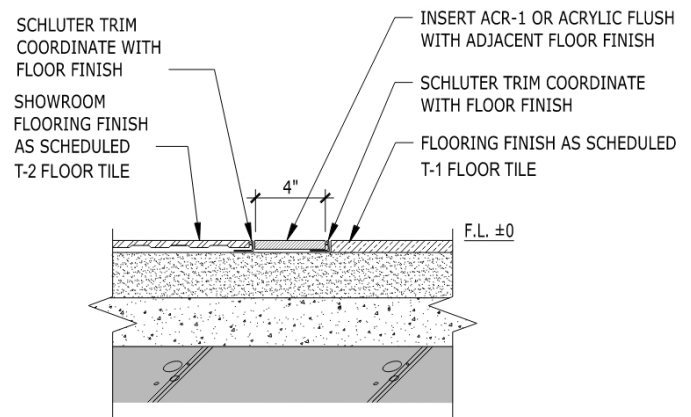

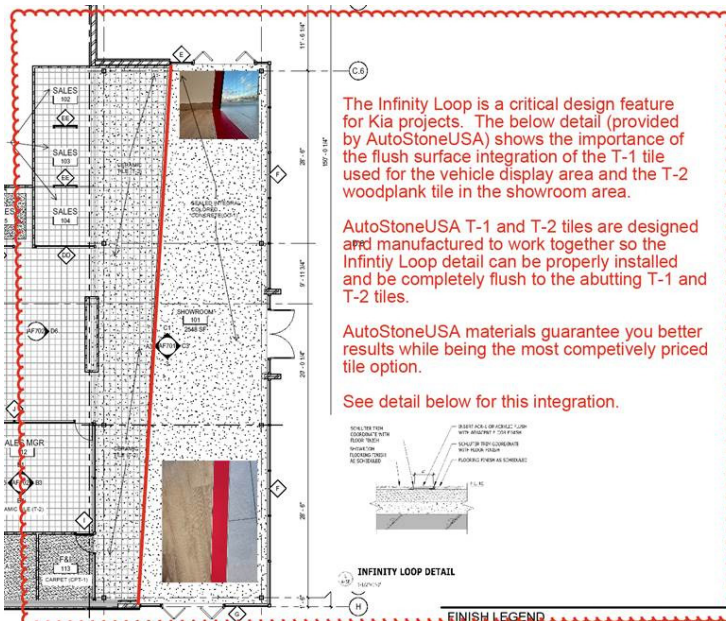

T-2

Designed and Manufactured to Work Together Seamlessly

AutoStoneUSA's T-1 tile and T-2 (woodplank) tile for the showroom area are designed to help architects with their floor plan. Both tiles are the same thickness which allows for a flush install.

How AutoStoneUSA Delivers Better Automotive Retailing Environments

- AutoStoneUSA guarantees the most competitive price
- Made in the USA tile materials
- On-time delivery (no supply chain risk)
- Future tile purchases are easy to receive from our Tennessee plant
- Creative materials and others are imported - not made in USA
